

THE PROBLEM

Leaders cannot change what they cannot see.

Most agencies manage supervision by proxy: case counts, compliance rates, lagging indicators. The actual work, the interaction between officer and participant, stays invisible. RePath Intelligence is the shift from proxy to practice, built on the dataset only RePath captures: 7,000+ Visit Assist transcripts, 180+ officers, 4,000+ participants, growing weekly.

THREE PILLARS · ONE OPERATING VIEW

PILLAR 01

Supervision Practice

Score what is happening inside every contact against evidence-based standards. Practice Quality Score (PQS) rolls up from interaction to officer to district.

PILLAR 02

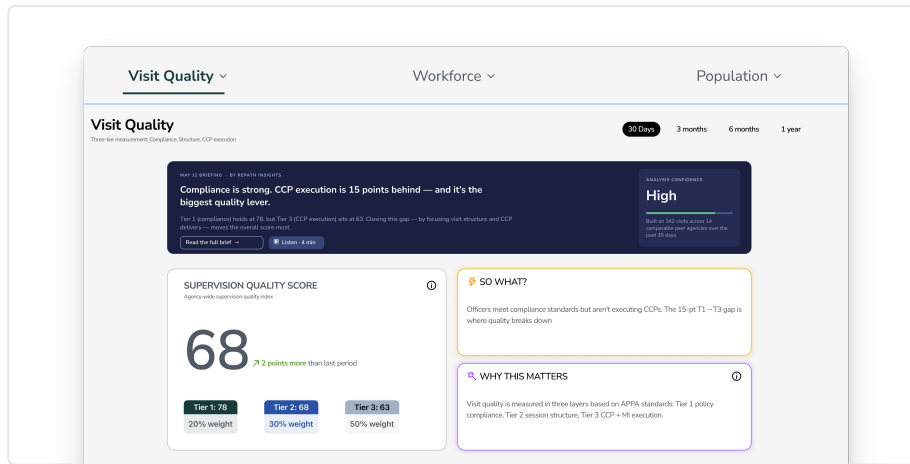

Officer Performance

Turn scored practice into a view of the team. Caseload performance, trajectory, weakest practice flagged for coaching.

PILLAR 03

Participants & Outcomes

Connect practice to outcomes. Population health, individual trajectories, intervention effectiveness by risk profile.

The Agency Operating View. The screen a deputy secretary opens first.

WHAT INTELLIGENCE DELIVERS

Practice visibility

See 100% of officer practice, not 0.8%.

Cross-district benchmarking

Compare on practice quality, not outcome lag.

Officer coaching leverage

Coaching shifts from sample to specific.

Supervisor capacity returned

Five hours per supervisor per week.

Legislative response time

Answer the legislature in minutes, not days.

The funding case

Agency-wide evidence, not pilot anecdote.

LEADERSHIP UNDER PRESSURE

"Having this tool is incredibly, is a 10. It's the goal. It's the game changer."

Megan Milner, Deputy Secretary, Kansas Department of Corrections
